

## Assignment Feedback

QQ1a: The student has partially addressed BI reporting practices by mentioning report authoring.

QQ1C: The response is repetitive and unclear. It should have addressed only data clustering and analysis.

QQ2: The response accurately defines the need for data pre-processing, including handling incomplete data.

QQ3: The explanation of data reduction, including both dimensionality reduction and data compression, is clear.

QQ4: There are some inaccuracies in the response, such as incorrectly mentioning the type of learning.

QQ5a: Clear differentiation between classification and clustering is seen, with the student correctly identifying the need for feature selection.

QQ5b: The answer correctly provides a brief overview of decision trees and its application in business intelligence.

QQ6a: The student comprehensively described the integration of Business Intelligence and ERP systems.

QQ6B: Although the response gives a basic overview of the roles of analytics in Business Intelligence, it lacks depth.

QQ6c: The definitions and features of WEKA and RapidMiner software are covered well in the response.
