

Assignment Feedback

Q9(a): The student answer accurately defines blockchain and its core features, including immutability.

Q9(b): The student answer correctly describes smart contracts and their benefits. However, the student also mentions that smart contracts are self-executing, which is not entirely accurate. Smart contracts are self-executing in the sense that they automatically execute the terms of the contract when the conditions are met, but they are not self-executing in the sense that they can execute without human intervention.
